PROFILE

CSE undergrad with a genuine obsession for AI, a 2–3 year track record in futures and forex trading, and a habit of building things most people just talk about. Currently developing CHRONUS — an AI system that models human personalities using real data, voice cloning, and local LLMs. Interned in data science, tested games for Riot, and have been learning markets the hard way — through actual trades. Looking to grow at the intersection of AI/ML and quantitative development.

WORK EXPERIENCE

BraiY Beam Technologies

Data Science & ML Intern

Jul 2023 - Aug 2023

- Worked across the complete machine learning lifecycle, including raw data collection, preprocessing, model training, evaluation, testing, and optimization.
- Applied ML workflows on a real-world banking marketing dataset to improve campaign targeting and predictive accuracy.
- Built and tested models using Python, Pandas, NumPy, and Scikit-learn.
- Collaborated on data-driven problem solving and practical implementation of supervised learning techniques.

Riot Games

Bug & Beta Tester

Mar 2024 - Mar 2025

- Tested pre-release gameplay environments and identified rendering, gameplay, and map-related issues.
- Reported reproducible bugs directly to developers with structured documentation

EDUCATION

Parul University

Vadodara

B.Tech, Computer Science Engineering

Graduation Date: Mar 2027

NG PATEL POLYTECHNIC

Bardoli

Diploma, Computer Engineering (8.4 CGPA)

Graduation Date: May 2024

PROJECT EXPERIENCE

CHRONUS

AI Personality Modeling System - Developer

Feb 2026 - Present

- Developing an AI platform capable of modeling public personalities using scraped text, audio, and behavioral datasets.
- Integrated local LLMs with personality-specific prompting, vector databases, and semantic retrieval pipelines.
- Implemented voice cloning using ElevenLabs and XTTS-v2 for realistic conversational outputs.
- Built with Python, Flask, React + TypeScript, Llama 3 (via Ollama), ChromaDB, Sentence-BERT, Whisper, Tailwind CSS, and Framer Motion.

Hackathon Project - Developer

Jan 2025 - Jan 2025

- Built a symptom-based diagnosis and medicine recommendation system using machine learning classification techniques.
- Recommended precautions and basic medical guidance using structured healthcare datasets.
- Achieved Top 10 placement in a university hackathon and advanced to SIH semi-finalist stage.

SKILLS & INTERESTS

Skills: uggingFace, ChromaDB, Pandas, NumPy; Voice & Data Tools: ElevenLabs, XTTS-v2, Apify, BeautifulSoup4; Development Tools: Git, GitHub, Postman, Jupyter Notebook, Cursor IDE, GitHub Copilot; Trading & Quant: Futures & Forex Trading, Liquidity-Based Models, Quantitative Strategy Exploration, QuantConnect

Interests: AI engineering, quantitative development, building production-ready intelligent systems, hackathons & achievements (SIH Semi-Finalist, Top 10 Hackathon Placement)
